## WHAT IS CLAIMED IS:

- A fuel feed apparatus disposed in a fuel tank, the fuel feed apparatus comprising;
  - a sub-tank that is received in the fuel tank;
- a pump module that is received in the sub-tank and includes:
  - a fuel pump that pumps fuel, which is supplied from the fuel tank to the sub-tank; and
  - a suction filter that is placed below the fuel pump in a vertical direction and is connected to the fuel pump and to a bottom inner wall of the sub-tank on an opposite side with respect to the fuel pump, wherein the suction filter removes debris from fuel to be supplied to the fuel pump; and
- at least one supporting member that has resiliency and supports the fuel pump in cooperation with the sub-tank at a location, which is above the suction filter in the vertical direction.
- 2. The fuel feed apparatus according to claim 1, wherein the pump module further includes a casing, which accommodates the fuel pump.
- 3. The fuel feed apparatus according to claim 2, wherein the pump module further includes a filter element, which surrounds the fuel pump and removes debris from fuel discharged from the fuel pump.

- 4. The fuel feed apparatus according to claim 1, wherein the at least one supporting member connects with the pump module at a location, which is above a center of gravity of the pump module.
- 5. The fuel feed apparatus according to claim 1, wherein the at least one supporting member connects with a top end surface of the pump module.
- 6. The fuel feed apparatus according to claim 1, wherein the suction filter includes a nonwoven fabric material disposed along an outer peripheral surface of the suction filter.
- 7. The fuel feed apparatus according to claim 1, wherein the suction filter includes a filtering material, which removes debris from fuel and has a bottom section that contacts the bottom inner wall of the sub-tank.
- 8. The fuel feed apparatus according to claim 1, further comprising an elastic member, which contacts the bottom inner wall of the sub-tank, wherein a bottom section of the suction filter contacts the elastic member.
- 9. The fuel feed apparatus according to claim 8, wherein:

a contact surface of the suction filter, which contacts the elastic member, has one of a concave surface section and a convex surface section;

a contact surface section of the elastic member, which contacts the suction filter, has the other one of the concave surface section and the convex surface section; and

the concave surface section has a decreasing inner diameter that linearly decreases toward a bottom of the concave surface section.

- 10. The fuel feed apparatus according to claim, 9, wherein the elastic member and the pump module are substantially coaxially arranged.
- 11. The fuel feed apparatus according to claim 1, wherein the at least one supporting member connects with the sub-tank at a plurality of connecting positions, which are spaced from one another in a circumferential direction.
- 12. The fuel feed apparatus according to claim 11, wherein:

the plurality of connecting positions of the at least one supporting member includes at least three connecting positions; and

a central axis of the pump module is located within an imaginary polygon, which has a plurality of vertexes, each of which is located in a corresponding one of the at least three

connecting positions of the at least one supporting member.

- 13. The fuel feed apparatus according to claim 1, wherein the at least one supporting member is snap fit to at least one of the pump module and the sub-tank.
- 14. The fuel feed apparatus according to claim 1, wherein:

the at least one supporting member is snap fit to the sub-tank;

each of the at least one supporting member includes a sub-tank side connecting portion, which is snap fit to the sub-tank and includes an outer peripheral section and an inner peripheral section; and

- a peripheral wall of the sub-tank is held between the outer peripheral section and the inner peripheral section of each of the at least one supporting member.
- 15. The fuel feed apparatus according to claim 1, wherein each of the at least one supporting member includes a connecting portion, which connects between the pump module and the sub-tank and has a wave shape.
- 16. The fuel feed apparatus according to claim 1, wherein each of the at least one supporting member includes a sub-tank side connecting portion, which is engaged with the sub-tank and generally extends in an installation direction of

the pump module to the sub-tank.

- 17. The fuel feed apparatus according to claim 1, wherein an axial direction of the fuel pump coincides with an axial direction of the sub-tank.
- 18. The fuel feed apparatus according to claim 1, wherein:

the suction filter includes a filtering material and an inlet pipe; and

the inlet pipe extends linearly in an axial direction of the pump module.

- 19. The fuel feed apparatus according to claim 18, wherein an inner diameter of the inlet pipe is greater than an axial length of the inlet pipe.
- 20. The fuel feed apparatus according to claim 18, wherein the inlet pipe and the pump module are substantially coaxially arranged.
- 21. The fuel feed apparatus according to claim 2, wherein the casing has a peripheral wall formed in a mesh-shape or a lattice-shape.
